

Reap the stormy harvest

Widespread acknowledgement of the reality and threat of climate change (and of the urgency of dealing with it), coinciding with peak oil flowing from belligerent or unstable suppliers, means that necessity really is the mother of invention in renewable energy.

At Aaron & Partners LLP, we are proud to be advising in the vanguard of this new reality.

AARON & PARTNERS LLP

SOLICITORS

With new technologies developing fast, and previously novel systems gaining wide acceptance, you need advisers who can navigate you through the rapids of competing interests and conflicting or inadequate advice.

At Aaron & Partners LLP, we have true expertise in this complex but rewarding area, drawing on the skills of our planning, property, agriculture, minerals and waste, corporate, construction and other teams to form a dedicated practice unit that is focused, flexible and extremely competitive.

The head of our Renewables Team, David Harries, is personally involved in piloting one of the largest proposed wind farm developments in the UK through planning and development, and is well aware of the opportunities and pitfalls renewables present. He recently led the team in the successful financing and construction of a substantial onshore wind scheme, in the teeth of the financial crisis.

Renewable energy doesn't begin and end with wind power, however. We are also advising regarding biomass, biogas and landfill gas schemes, and our experience of foreshore and seabed leases makes us ideally placed to advise with regard to tidal and other offshore generation.

We understand the issues at every level, and whether you are a developer or a landowner you can be assured that Aaron & Partners LLP will provide first class advice and assistance.

We can advise you in particular on:

- Onshore and offshore wind
- Biogas
- Biomass
- Tidal and Hydro
- Landfill gas
- Waste and Environmental
- Planning
- Grid Connection and Power Purchase Agreements
- Financing – bank finance, mezzanine and equity
- Joint venture agreements
- Land acquisition and easements
- Construction, equipment supply and operations
